We've all heard about the environmental concern about "old-growth forests" but did you know that most paper, cardboard and products made from these are from trees that were grown as a renewable resource? Forest products—other than those from unique environments like old-growth forests—can be re-seeded, re-grown, re-harvested and recycled. This often makes products made of paper or cardboard a greener choice than plastics and foam. Of course, the best solution is always to reduce and reuse when possible, but using renewable resources can help too.
